GRAFIX I/R DRYERS

Traditional inks and coatings (water-based or solvent-based) dry through evaporation. The bases must be removed from these inks in order for them to turn into a dry solid. This process can take quite some time if unassisted. By heating the inks using IR energy evaporation is accelerated and drying time is greatly reduced. Grafix Australia supply I/R & HAK drying systems to fit most sheet-fed offset presses.

GOLD REFLECTOR I/R LAMPS

The heart of all I/R dryers are the I/R lamps, to keep your I/R drying equipment running at peak performance and energy efficient I/R lamps should be changed every 5000 hours of operation. ESJ stock a wide range of Gold reflector quartz I/R lamps for most I/R dryers fitted on offset presses. These lamps carry a 5000 hour or 1 year manufacturers guarantee.

For more information call our hot line +61 (0) 4088 87948.

I/R Lamps available for: All Grafix, IST, Heidelberg, MAN Roland dryers.
